NEW SOFTWARE RELEASE

IXP220_{system}
Version 1.8

The IXP220 Access Control System is fast becoming recognised as one of the most complete user friendly and powerful medium to large access control solutions in the industry, at the same time ahead of competitors with its affordability and extensive scalability options.

However, it's not just the technologically sound hardware that makes this system superior, it's the seamless marriage between the hardware and the 'brain' that drives each function and feature of the IXP220 – the Software Suite. And it is with great excitement that Impro Technologies announces the release of the latest updated version of the IXP220 Software Suite V1.80.

What's New:

- Elevator Control
- Sagem Integration updates (Biometrics)
- Building Management options (I/O Control)
- Upgraded Web Reports
- Universal CSV export utility
- Anytag enrolment

Version 1.80

The IXP220 Software Suite consists of a set of Software Modules (performing on a client-server basis) used for monitoring and controlling residential, small, medium and large commercial sites. **Version 1.80** is flexible enough to add selected ImproX hardware, as well as provide the ability to support third-party hardware devices such as biometrics, elevators or intrusion alarms. The Software Suite also provides an easy-to-use User Interface for real-time monitoring. **Version 1.80** provides a wide array of features, including a standard Web Reporting facility which records and shows the movement of Tagholders, and time on or off site. All these features support both simple and advanced configuration options. The IXP220's scalable design allows for single-system users or expanded systems for multiple sites in LAN and WAN configurations. The modern Hardware and Software design lends itself to a system that can cope with any access control and monitoring needs for residential and small to medium, and large commercial installations. In short, The IXP220 Access Control system is **EFFORTLESS, SCALABLE and SECURE**, and your number 1 solution.
